PACE to Introduce New Low-Cost ADS200 AccuDrive™ Production Soldering Station at IPC Apex 2018

Vass, NC – Feb 1, 2018 – PACE Worldwide announces the ADS200, a new high-power, low-cost production soldering station, to be introduced at IPC APEX on Feb 27-Mar 1, 2018 in Booth #2405. The ADS200 features PACE's new AccuDrive temperature control technology, which delivers unsurpassed thermal performance and highly accurate temperatures, without the need to change tip cartridges or calibrate. Its

advanced electronics provide instantaneous load sensing and on-demand power to quickly reflow solder joints at the lowest, safest temperature required, regardless of the mass of the application. Intended for extreme, multi-shift production use, the ADS200 features a rugged, all-metal design, including housing, soldering iron and tool stand. The system is intuitive and easy to operate – just power it on, set the temperature with arrow keys and start soldering. No training required. The ADS200 features the new TD-200 Tip-Heater Cartridge Soldering Iron, with its sleek and ergonomic aluminum handle designed to stay cool and comfortable during continuous production soldering. Blue Series Tip-Heater Cartridges integrate a high-accuracy sensor with a robust heater, delivering up to 120 Watts of power. Unlike curie point systems, select any temperature (from 380°F/193°C to 850°F/454°C) without changing the cartridge – one tip, any temperature. The quick-change cartridges can be quickly swapped while hot, and achieve set temperatures instantly. Yet the tip cartridges are only half the price of most other cartridge style or curie point tips. For a limited time, the ADS200 AccuDrive Production Soldering Station is being offered at an introductory price of under \$240 each. For more information, please visit our website at www.paceworldwide.com/ads200.

About PACE®

PACE Worldwide has been providing the most innovative, cost-effective solutions in hands-on soldering, rework and repair of advanced electronics to companies and

government around the globe for well over 50 years. Since the dawn of the modern electronics industry, PACE has played a key role in the development of groundbreaking products, training films, curricula, materials and electronic assembly standards, including several soldering, surface mount and thru-hole rework videos co-produced with the IPC and industry.
