Delta NC611 Lead Free No Clean Solder Wire

New Delta NC611 Solder Wire designed for lead free circuit board assembly & rework has been specifically formulated for higher activity, fast wetting action, no flux spatter and clear residue. NC611 is available with a new patented lead free alloy, Ecolloy™ that performs better than SAC305 in the drop test. Ecolloy has a melting point range in-between SAC305 and Sn/Cu alloys for better solderability performance.
