For Immediate Release

PDR Rework Systems Deploys More than 4500 Systems in the Field

Shingle Springs, CA — October 2016 — PDR Americas, a leader in IR rework, is pleased to announce the successful deployment of 4500 focused IR rework systems and counting. The company attributes its success to its ongoing focus on providing the industry with operator friendly rework systems that are both simple to use and maintain. Simply building a rework system that offers unique advantages to the industry is not enough. Equally important is PDR's 'core value' commitment to 'long-term customer satisfaction'. From CEO/CFO to Rework System Operator, PDR's support, training, warranty, education, and financing programs are key elements of the PDR experience, enhancing the value of your organization's ability to get the job done.

At the operator level, PDR IR rework systems provide the operator with a **visible** means to determine where heat is being applied (focused IR) and to easily observe solder reflow. This precision targeting of visible focused IR eliminates the guesswork out of not only day-to-day rework tasks, but greatly accelerates profile development process as well.

According to Dave White, President and CEO – PDR America's, "PDR's mission has and remains consistent with PDR's absolute commitment to providing quality built systems that change existing paradigms when it comes to complex rework tasks. Our core competency is making rework as simple as possible through the use of advanced software algorithms, the manipulation of band pass technology (short/medium wave IR), highly accurate thermo sensing technology, superior camera optics, and extremely low maintenance mechanical design."

Since 1985, PDR customers have voted with their pocketbooks for a system that is air nozzle free, capable of true in-process control, and that produces high-yield repeatable results...no matter the complexity of the application at hand. As PDR celebrates its 30th anniversary and remarkable deployment of 4500+ systems now commissioned, the company remains the industry technology leader through its conscientious commitment to simplifying the rework process.

About PDR Americas

PDR Americas is a business owned by White Industrial Corporation. PDR is a pioneer in IR rework, test and inspection systems, with its products specified by many of the world's largest names in electronics manufacturing and repair. PDR's patented "Focused IR and Thermal Management Technology" is fully vested by leading aerospace, defense, biomedical, telecom, automotive, MRO, R&D, and electronic and manufacturing firms for its highest quality and best performing systems.
