 - Waste fittings 3" 1/2 - thread 1" 1/2
 - Basket strainers 3" 1/2 - thread 2"
 - Outlet 1" 1/2
 - Stainless steel
 - Australian Market
 - Bottle trap
 - "S" body
 - "Bottle" body

1969: ALBA was born to design and create MOULDS for the moving.

1970: A new branch equipped with oilhydraulics press for the injection moulding is opened. The company becomes ALBA MPM LTD (Plastic material hand-made).

1971: The high technology equipment of the staff takes the company to a huge development in the moulding on behalf of external firms. In the meantime the experienced promoters understand to balance the production on behalf of third people with an own production. The technological progress of this time pushes the plastic material compared to the metal one. A new field to win is discovered, namely the hydrosanitary sector and more precise the sifon fittings. The moplen sifon enters the market.

1975: The ALBA MPM, very appreciated in the technical-industrial sector, covers a big share of the domestic market after 4 years from the beginning of the own production.

1976: Development requires room: a new workshop over 3000 square meters was planned.

1977: ALBA MPM moves to the new center in Brozzo V.T.. The new technology is applied both to the technical items and to the "SIFONE" production. New machines tool enter the workshop, new oilhydraulics press enrich the moving department.

1978/79: The technical office is completely changed. The computer era leads the planning.

1980: While the moulding on behalf of external firms follows its natural technical increment, the hydrosanitary field knows an exciting development. Thanks to the associated company FEMA, the ALBA sifon, with its logo, enters the most important markets, competing with the main Italian companies.

1981: The department for the moulds design becomes independent: ALBA MPM remains as moulds workshop. ALBA 2 MPM was born to receive both the technical and hydrosanitary production.

1982/90: The development goes on: the moving keeps on working at the center in Brozzo. The moving workshop covers on its own and on cooperation 30 blocks. In Gardone V.T. on an area of over 3000 square meters grow warehouses for assembly and stocking.

1995: The hydrosanitary field lives a deep competition and must be divided. ALBA 2 MPM addresses to the waste pipe for kitchen. In a few years it goes alongside with one of the biggest Italian leader of the sector. These years begins the conquest of foreign markets.

1997: The room becomes insufficient.

1998/99: The third millennium challenges require far-sightedness. A new brand branch was born an 10.000 square meters in the strategic area of Rodengo Saiano where the main roads meet.

2000: ALBA 2 MPM covers 15.000 square meters. It is composed of oil-hydraulics press of 50 to 1200 t., internal and external mechanic workshop, welding department, assembly and warehouses further to the experience of well-trained men.

2000: The famous waste-pipe by ALBA 2 MPM with all the huge range of MPM items are exported to ASIA, Europe, Africa, America and Australia.

**Get used to look at things
from a new perspective...**

... this one!

**Sometimes being
"level-headed"
can be an advantage!**

The constant evolution of the kitchen sink sector urged us to develop a new product to match square or slightly radiat kitchen sinks.

An alternative to the rounded shape, the new square kitchen sink is consistent with the most recent design trends. In approaching the market, the new **7000 SERIES** reflects the high quality criteria and careful selection of materials characterising all **ALBA2MPM** products.

The **7000 SERIES** is available in the brushed or polished steel versions, with different overflow pipes and pop-up system equipped with square handle.

From now on, looking at things from a new perspective is up to you!
