Tri-Technical Systems Announces Release of AIMsi v12

Dubuque, Iowa - Tri-Technical Systems is excited to announce the release of version 12 of its comprehensive AIMsi point of sale (POS) software. AIMsi v12 is a complete new rewrite, written in C#.Net and using Microsoft SQL Server as its database structure, which provides increased security, stability and speed. AIMsi v12 offers a modern new interface with customizable menus and point of sale screens. This enables the retailer to design the navigation within AIMsi for their unique business, increasing its intuitiveness and aiding with employee training. This powerful system customization can be set by workstation or employee. Other popular new features include a built-in backup system, the ability to schedule tasks, and enhanced login security settings. Tri-Tech's integration services solution, Active-e, has also been enhanced. The architecture has been built for mobile applications, and several are currently available in order to help increase efficiency for the retailer. Additionally, Active-e now includes a public facing API that retailers can access in order to develop their own third party integrations, websites, mobile apps and more.

Of particular interest to firearm retailers and ranges is the newly developed integration with iTouch, a leading provider of integrated digital applications for the hunting and fishing sports industries. The integration allows firearm retailers to electronically complete and process the ATF Form 4473 and NICS background checks for their customers, increasing security and efficiency, while decreasing manual errors.

AIMsi is a comprehensive point of sale (POS), inventory management, accounting and business software application for firearm retailers and ranges. The software offers retailers not only a way to control inventory with the ability to create and track A & D records, manage customers and track sales, but also offers fully integrated custom add-on modules such as Gunsmithing Management, Range Management, Lesson/Appointment Scheduling & Billing, Short Term Rentals, Rent and Sales Contracts, Contact Management, Emailing capabilities, Purchase Orders, General Ledger and Accounts Payable. AIMsi allows users to build their own custom retail software solution by adding on the modules that are needed.

Active-e is an integration services solution that works in conjunction with AIMsi for e-commerce shopping carts, mobile applications, business to business (B2B) product updating operations, customer to business (C2B) functions such as sales history, order status, open account payments, rental contracts and payments, repair estimates and payments, reservations and much more.
